The 8.0 meter is a cruising sloop designed for maximum sailing comfort on extended cruises. It has a complete inventory of running gear which includes a large, high aspect ratio mainsail with quick reefing, and a headsail. The mast is internally rigged and anodized. All lines run to the cockpit which adds greatly to the comfort of the helmsman on extended voyages.

The spacious, self-bailing cockpit will comfortably seat six and has seat locker storage for the outboard auxiliary and sails. Visibility over the cabin to the bow is outstanding. Lifelines and toe rail track make a comfortably useable walk-around deck with molded teak plank, non-skid texture.

Discover carefully planned live-aboard facilities below. The 6'0" headroom provides light, airy, spacious accommodations. These include berths for five, a hanging locker, a completely enclosed head with a portable toilet, and vanity sink with cabinet optional. A complete, highly functional L-shape galley is provided with an alcohol two-burner stove, a stainless steel sink, and large top-loading ice chest. There is ample enclosed dish storage and silverware drawer, and plenty of counter space with high pressure laminated tops. Two large, molded-in, sealed watertight, bronze, acrylic picture windows and translucent plexiglas hatches create an unusually light cabin with excellent ventilation. The custom yacht impression of the cabin is created by the use of a color-coordinated interior with carpeting and drapes. The decorative cushions on the seats and berths are thick foam for maximum beauty and comfort.

The strong, safe and trouble free hull has a lead ballasted keel. The 8.0 meter is available in deep draft keel, or a long running shoal draft keel for shallow waters and trailerability. Optional Atomic-4 auxiliary power and other diesel and gas engine options are offered. The deep, generous freeboard provides outstanding sea-handling capabilities with exceptional dryness. A diaphragm gusher pump, navigation and running lights are included.

Construction is hand laid-up fiberglass with laminations of woven roving, glass cloth, mat, and balsa core sandwich used in the deck, resulting in an exceptionally tough deck and hull. Since this boat can be trailered, a trailer specifically designed for the 8.0 meter shoal draft keel is available.

The meticulous craftsmen who build S2 Yachts care about and are proud of what they build. Their goal is to build a product second to none — a yacht of which the owner can be proud.
